The Problem.

Pharma products should be available **24/7/365**, because the access to remedies **anytime, anywhere** is a **FUNDAMENTAL HUMAN RIGHT**, not a privilege

Brick & Mortar pharmacies are concentrated in large urban centers

Even in large cities, pharmacies operating outside of standard business hours are an exception

The delivery of medicines is neither safe, nor economically viable and there often is an element of urgency

There is a disturbing phenomenon of shortages and the resulting household overstocking with medicines

As a result,

substantial parts of the population are deprived of access to medicines

the Solution

A **robotic** kiosk that enables users to **perform transactions** through a live connection with **remote pharmacists**, effectively **replacing the operations of an entire pharmacy**

Fully automated
Pharmaceutical terminal

Offering a flexible
assortment of 1,500 medicines
24/7/365

Serviced by a qualified
pharmacist via video
connection in real time

Features.

Touch monitor
(single or multitouch options)

Thermal printer

Scanner

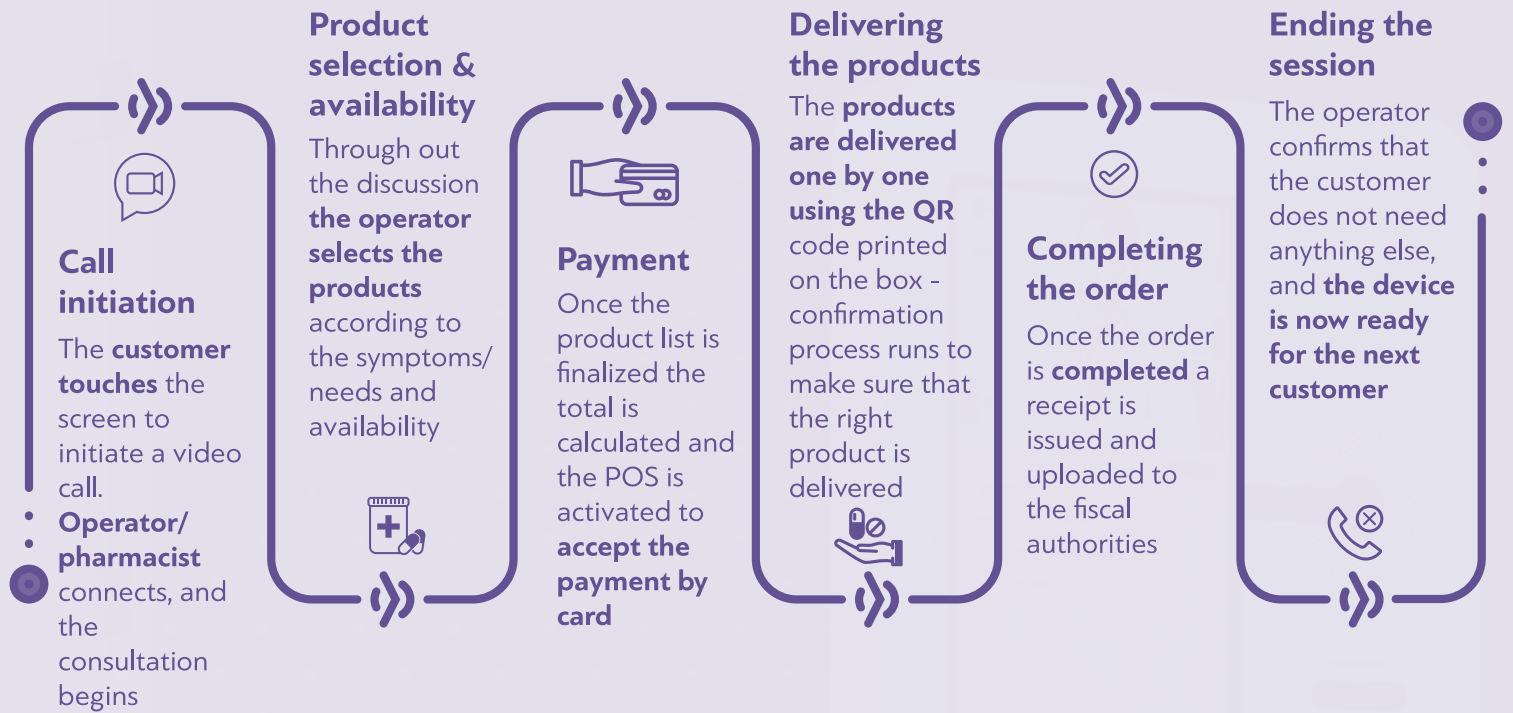

Unattended EFT/POS
Banknote/Coin recycler

Capacity up to 1500 boxes
